

Note about MHz Networks - Local Channels 56 & 57

from: <http://www.mhznetworks.org/>

What added value does this new Digital Transmission mean to you as a viewer of MHz Networks? Digitally, MHz Networks is broadcasting 9 channels to the Washington DC viewing area. We currently transmit 4 digital channels on Digital Channel 57, and 5 channels on Digital Channel 30.

As you can see, the new transmission system allows MHz to bring 7 new channels to the Digital Over the Air viewer. In order to meet the FCC mandate for February 2009, Channel 56 and DT 57 will go off the air at the end of the summer of 2008 and is necessary in order for us to build a new Digital Transmission System.

We will return on Digital Channel 24 with the broadcast starting on the 18th of February 2009. DT 24 is our new Digital Channel assignment that we must have up and broadcasting for the mandated February shut-off of Channel 56. While channel 56 and 57 are off, and until channel 24 is allowed to be turned on, MHz 1 can be viewed on Digital Channel 30-1.
